Archit Yadav

Java Full Stack Developer

+91-7905996926 architvadav959@gmail.com LinkedIn GitHub

Hyderabad, Telangana, India

Professional Summary

Java Full Stack Developer with **2+ year of full-time experience** at **KFin Technologies** building **microservices-based applications**, **event-driven systems**, and **enterprise-grade monitoring platforms**. Strong expertise in **Spring Boot**, **REST API development**, **distributed systems**, **real-time communication**, and **secure backend architecture**. Experienced in developing scalable frontend applications using **React.js** with strong knowledge of **Kafka**, **Redis**, **WebSockets**, and **CI/CD pipelines**.

Technical Skills

Languages	Java 11/17, JavaScript, SQL
Frontend	React.js, Redux, HTML5, CSS3, Tailwind CSS
Backend	Spring Boot, Spring Security, JPA, Hibernate
Databases	PostgreSQL, MySQL, Redis
Messaging & Streaming	Apache Kafka, WebSockets
Architecture	Microservices, Event-Driven Systems, RBAC, Distributed Systems, Caching
Security	AES Payload Encryption, Secure API Design, Role-Based Authorization
DevOps & Tools	Docker, Git, Linux, CI/CD Pipelines, Postman
Testing	JUnit, Integration Testing
Methodologies	Agile, Scrum, Code Reviews

Experience

KFin Technologies Limited — **Aug 2024 – Present**
Software Engineer — Java Full Stack Developer — *Hyderabad, India*

- Led delivery of **4 enterprise platforms** including **SRE Monitoring Tool**, **Asset Management System**, **DB Activity Monitoring**, and **Task Tracker** adopted across multiple internal teams.
- Architected **microservices-based REST APIs** using **Spring Boot**, **JPA**, and **Hibernate**; reduced **P95 latency by 20–30%** through query optimization and strategic indexing.
- Developed scalable frontend applications using **React.js** and **Redux**; implemented throttling, debouncing, and pagination reducing redundant API traffic by **40%**.
- Implemented **persistent WebSocket channels** for real-time log streaming and live alert systems achieving near-zero latency communication.
- Designed and implemented **RBAC authorization systems** using **Spring Security** restricting unauthorized data access across enterprise applications.
- Integrated **Kafka event-streaming pipelines** for asynchronous processing, distributed notifications, and service decoupling.
- Used **Redis distributed caching** reducing database round-trips and improving application throughput under peak traffic conditions.
- Improved production observability using **structured logging**, **distributed request tracing**, and centralized exception handling reducing **MTTR by 25%**.
- Implemented **AES-based payload encryption** securing sensitive inter-service communication and API data transmission.
- Maintained **CI/CD pipelines** with automated testing and deployment workflows ensuring stable production releases.
- Worked extensively in **Agile/Scrum** environment participating in sprint planning, retrospectives, and code reviews.
- Received the **Team Skill & Will Award** for technical ownership and consistent delivery performance.

KFin Technologies Limited — **Apr 2024 – Aug 2024**
Software Engineer Intern — Java Full Stack — *Hyderabad, India*

- Contributed to enterprise platforms including **SRE Monitoring Tool** and **Asset Management System** during a **4-month internship**.
- Developed **Spring Boot REST APIs** and **React.js components** with Redux for scalable frontend workflows.
- Worked on **JUnit testing**, QA defect resolution, API integrations, and backend debugging activities.
- Gained hands-on experience with **Kafka**, **Redis**, **Docker**, and **WebSockets** directly applied in production systems.

Projects

SRE Monitoring Platform *React.js — Spring Boot — Kafka — Redis — WebSockets*

- Built enterprise observability platform monitoring over **100,000+ services** with live service health tracking and AMC monitoring.
- Implemented **Kafka-driven alert engine** reducing incident detection time by approximately **40%**.
- Developed real-time dashboards using **WebSockets** eliminating polling and reducing frontend overhead by **60%**.
- Integrated AI-assisted ticket generation workflows reducing operational triage efforts during incidents.
- Designed domain-scoped alert routing systems minimizing unnecessary notifications and alert fatigue.

Asset Management System *React.js — Spring Boot — PostgreSQL — Kafka — WebSockets*

- Developed complete lifecycle management system governing over **15,000+ physical and digital assets**.
- Implemented **real-time asset synchronization** using WebSockets across active user sessions.
- Integrated **Kafka event streaming** for distributed synchronization between monitoring and reporting systems.
- Applied **AES-256 field-level encryption** securing sensitive asset and contract metadata.
- Designed **immutable audit logging systems** capturing every asset state transition for compliance reviews.
- Built executive analytics dashboards showing utilization rates, AMC renewals, and allocation summaries.

Database Activity Monitoring Tool *React.js — Spring Boot — Kafka — WebSockets*

- Built enterprise-grade security and compliance platform monitoring database activity across **multiple database instances**.
- Implemented **high-throughput Kafka ingestion pipelines** handling millions of log events efficiently.
- Developed live monitoring dashboards enabling DBAs to identify suspicious query patterns in real time.
- Implemented **TLS-encrypted communication** and payload signing securing sensitive database activity logs.
- Built rule-based anomaly detection systems identifying off-hours access, mass deletions, and privilege escalation attempts.

Task Tracker & Productivity System *React.js — Spring Boot — WebSockets*

- Built centralized productivity management platform supporting **50+ team members** with task tracking and workflow management.
- Implemented **real-time task synchronization** using persistent WebSocket communication channels.
- Optimized dashboard performance using server-side pagination and request debouncing reducing load times by **35%**.
- Developed reporting systems generating sprint analytics, workload distribution, and completion metrics.
- Designed workload heatmaps helping managers identify resource imbalance and delivery bottlenecks.

Education

Lakshmi Narain College of Technology **2022 – 2024**
Master of Computer Applications (MCA) *Bhopal, India*

Bundelkhand University **2017 – 2020**
Bachelor of Science (Computer Science) *Jhansi, India*
